(54) Title: METHOD AND SYSTEM FOR GESTURAL CONTROL OF AN APPARATUS

(57) Abstract: In order to control an apparatus (40), in particular provided with an image display associated with a display screen (41), this control system comprises a control device (1) carried by the user and including means for measuring his movements following at least a first axis (Z), and means for transmitting the movement measurements to a processing device (20) connected to the apparatus to be controlled (40), the processing device comprising means for determining the commands to apply to the apparatus to be controlled as a function of received movement measurements, the controls comprising information about displacement in a plane (X-Y) non-parallel to the first axis (Z), and information about control activation determined as a function of movement measurements along the first axis (Z), transmitted by the control device.
